TRUST YOUR SMILE TO A SPECIALIST

Dr. Marshall Fagin
Prosthodontist

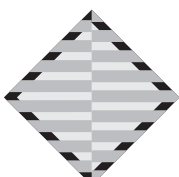

Q: My teeth are very dark due to being on tetracycline when I was younger. Will bleaching help whiten them?

A: Like many patients with dark discolored teeth, there are variations in intensity. Some whitening materials will help lighten these teeth, but one hour 'in-office' whitening systems are often stronger and faster. However, there are limits and long-term maintenance is needed. Many avoid porcelain veneers for whitening their teeth due to significant tooth destruction needed to achieve it. Now, with Lumineers, Dr. Fagin can often achieve this without any tooth reduction or numbing shots. If your teeth are worn, chipped or rotated, this technique with Lumineer porcelain materials offers the opportunity for an instant smile makeover. Dr. Fagin has been involved in lecturing and giving hands-on courses across the United States and Canada for over 30 years on smile makeovers and on many areas of Cosmetic and Functional Aesthetic Dentistry.
