Dr. Marshall Fagin
Prosthodontist

Q: Can implants help me with orthodontics?

A: For over a decade I have been lecturing on orthodontics and implant dentistry. Today's techniques continue to improve. Implant support will allow for better controlled and faster orthodontic treatment, as well as tooth movement that would not have been possible without implant support. Experience in working as a team both in treatment planning and monitoring treatment, has been important to creating predictable outcomes, whether implants are used as an aid for anchorage in moving teeth or where spaces are being created for implant placement. The final restorative plan, esthetically and functionally, together with proper precision placement of implants where they need to be, places us as the Prosthodontist, at the center of the team effort. Communication by all involved prior to starting treatment, combined with monitoring by all throughout, will significantly impact end results. **Call Fagin & Associates - Prosthodontists today, for your comprehensive exam and consultation.**

- Tooth Whitening
- Cosmetic Veneers & Crowns
- Complete Dental Rehabilitation
 - Crowns & Bridges
 - Implant Crowns & Bridges
- Implant Supported Dentures
